# Mohammad Ali Jesar

Senior Full-Stack & AI Engineer · Ruby on Rails · Shopify & E-commerce · MCP & RAG

Lahore, Pakistan · mohammadalijaisar@gmail.com · mjesar.github.io · github.com/mjesar · linkedin.com/in/mjesar

## Summary

Full-stack and AI engineer (Ruby on Rails) with 7+ years of experience building production software for international clients, 4+ of them specialized in Shopify and e-commerce. Contributed to five apps on the Shopify App Store (three also on BigCommerce), from architecture through App Store publishing and merchant support. Strong in Rails architecture, Sidekiq background processing, performance work and catalog and order synchronization. Now building AI features on the same stack: MCP servers that expose application data to LLM agents, RAG on PostgreSQL with pgvector, and agents with evals and human approval.

## Skills

- **Backend:** Ruby on Rails, service objects, RESTful and GraphQL APIs, Sidekiq, Redis caching, query optimization, N+1 resolution, indexing
- **AI and LLM integration:** MCP servers (tools, resources, prompts, JSON Schema validation, read-only and destructive annotations), JSON-RPC 2.0, RAG with pgvector and Voyage AI, tool calling, agent loops, evals, RubyLLM, Claude and Gemini APIs
- **Shopify:** Shopify CLI, Shopify Functions (Scripts-to-Functions migration for discount, delivery and payment customizations), Checkout UI Extensions, Theme App Extensions, Liquid, Polaris and App Bridge, Admin and Storefront APIs, webhooks, App Store publishing
- **E-commerce platforms:** BigCommerce apps (Catalog, Orders and Checkout APIs), Amazon SP-API
- **Frontend:** React, JavaScript, Hotwire (Turbo, Stimulus), esbuild, HTML and CSS
- **Data:** PostgreSQL, pgvector, SQLite, MongoDB (Mongoid), Redis
- **Practices and DevOps:** RSpec, code review, branch and pull request workflow, CI, AWS, Heroku, Google Cloud, Docker

## Experience

### Ruby on Rails Developer, MGLogics

December 2021 to June 2026 · Remote, US clients

- Designed, built and maintained Shopify and BigCommerce apps with Ruby on Rails and React for furniture and retail merchants.
- Contributed to five published Shopify apps covering catalog and order sync, SEO and JSON-LD schema, geolocation redirects and order-fraud prevention.
- Built Amazon SP-API integrations for product listings, variants and image uploads, automating previously manual work.
- Designed and scaled Sidekiq background processing for synchronization and long-running jobs, with retries and reliability in mind.
- Improved performance with Redis caching, query optimization, N+1 fixes and indexing for high-volume data processing.
- Owned deployment, versioning and releases to the Shopify and BigCommerce app stores, including platform compliance and post-release support.
- Diagnosed production issues across app code, DNS and email delivery, and supported merchants directly through to resolution.
- Wrote RSpec tests and took part in architecture decisions and code reviews.

**Backend Software Engineer, SimpleDeploy**

April 2019 to December 2021 · Karachi, Pakistan

- Developed and maintained RESTful API services in Ruby on Rails on SQL and NoSQL databases.
- Built management MVP tools for German clients, with code quality, security and testing as delivery standards.

## AI and open-source projects

**shop_mcp_server**

MCP server in Rails 8.1 that exposes a store's products, orders and inventory to Claude: 7 tools, 2 resources and 1 prompt, approval-gated writes, transactional orders, and semantic search with Voyage AI and pgvector. Diagnosed a legacy SSE vs Streamable HTTP transport mismatch and moved to the official MCP Ruby SDK.

**ai_shop_assistant**

Shopping assistant with RubyLLM and Gemini that searches Shopify's live Catalog API over MCP, with Solid Queue jobs, Turbo Stream replies and a hand-written JSON-RPC client after a gem failed on the handshake.

**product_geo_agent**

AI agent that scores a Shopify product's AI discoverability (GEO and AEO) with five tools, deterministic scoring in Ruby, an eval harness and live tracing.

**little_ghost (upstream contributions)**

Found, reproduced and fixed three bugs in the little_ghost Ruby agent gem (Gemini thought signatures, function response names, dropped agent hooks). All three merged and released in 0.11.0.

## Education

**B.S. in Information Technology (Software), Sindh Agricultural University**

2012 to 2017

**Python AI Bootcamp, Axiom Enterprises**

2018 · Flask web apps with TensorFlow and Keras models
